Diplomatic Doings in Chili.

We make the following extract from a Valparaiso letter of Feb. 26, published in the *Courier and Enquirer*:

"Mr. Barton has had several points of debate with the Minister of Foreign Affairs in the Capital. A. His horses having broken away, were arrested in the streets and detained after it was known they were his—He—

"2. He was treated very unkindly in consequence of his marriage, the Archbishop refusing his permission in order to marry him (Peru and Catharine), and further, after his declaration that he was a widower, made on honor, the Archbishop had, so Mr. Barton charges, made on him—"

"The rashness and rudeness to assert that he was living will. It would seem that the conduct of this digitory has met with great disapprobation from his agents in native lands."

Mr. Barton urges the claims, so long pending, for property seized by Lord Cochran on the coast of Peru. He took it as Spanish property, and so good price. It is now almost impossible to get rid of it.

"There exists a variety of opinion on the subject. Even some of the first merchants here doubt the equity of the claim."

On the other claims which have been submitted, and on which installments have been paid, Mr. Barton maintains that there are certain areas of interest that have from time to year been overlooked, amounting in all to \$20,000.

I think the effect of the steps taken, on both sides, in the affair of Mr. Barton's marriage will be beneficial, and will be seen in the eyes of the world, in the relations and commercial systems hitherto in practice, that a foreigner shall not marry with a native, even on condition of a fine paid to the Church, or else the baptism of apostasy and hypocrisy in becoming a Roman Catholic Government ought to be compelled, in case of his anticipated, expected, and impulsive regulations on this subject. True, it may be said other nations, its mother country Spain, and its sister Republics, do the same thing. But that is a specious excuse for Chili is at the head of them all, and more than educated statesmen can see that any of the other southern American states. Because of its commanding position it should come out manfully and speak for the rights of conscience. But the grand difficulty consists in this, that the people high and low, who are most interested in the strict observance of the present state of these laws that oppose the conscience, but are afraid to speak—afraid to brave the storm of fanatical unpopularity.
